

Wire Bonsai Tree Workshop

Spring 2025

We'll be doing this upstairs on the
third floor round tables!

Steps

Gather your wire

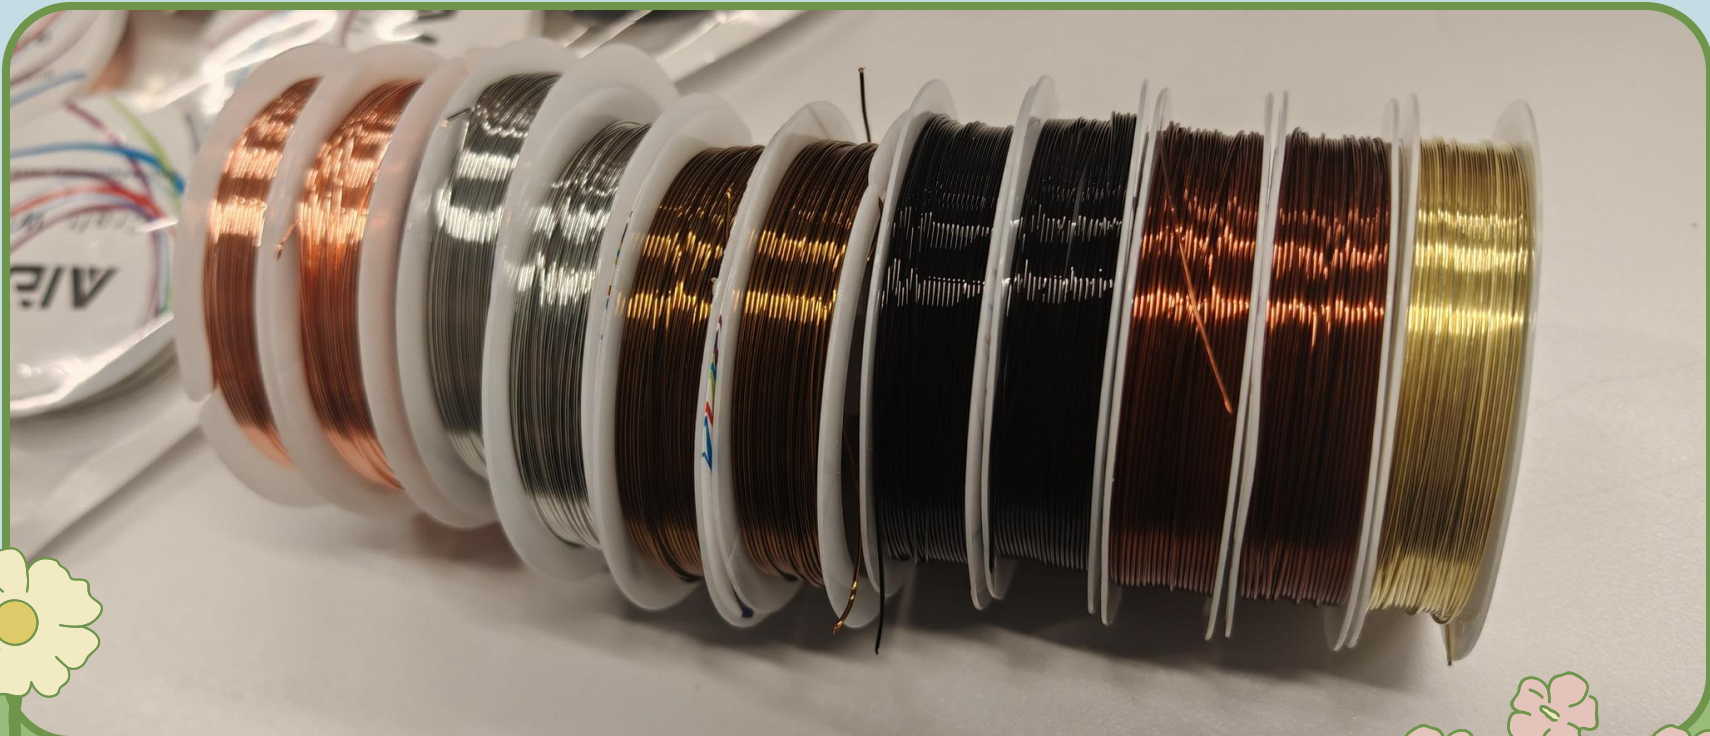

- A foot and a half (1 1/2) is a good starting point for the length of each wire
- Use the wire cutters to cut the wire of your chosen colors

Choose a stone

- We will be using stones as the base of the tree

Grab pliers

- We have jewelry pliers to bend the branches to create your leaves

For the base

Wrapping around the base

- You can use either a drill, or your hands to twist all the wires together about 4 inches from the bottom
- Section the bottom of the wire underneath where you twisted it to be able to wrap around the stone
 - You can create multiple subsections as well for this part
- Choose a flat part of the rock to be your base

- # of wire = # of branches
- Longer wire = fuller branches
 - It's ok if the length of the initial wire is too long, you can cut them down as you go
- Experiment with different methods of making your branches to start with
 - Rounded jewelry pliers are better for making loops
 - We also have needle nose if you prefer those
- Have fun!

Tips
